

Stay in Contact Throughout Your Facility

Mobility is essential to staying connected to your customers and your team. Mobility enables you to be as productive away from your desk as when you are at your desk. The ability to go anywhere and to do anything in your facility—while staying connected to your communication and messaging system—is a reality, thanks to Toshiba's powerful line of wireless telephones and soft phones. Access internal extensions, external lines, as well as voice mail from anywhere on campus that has coverage. Furthermore, you can still take advantage of the system's advanced calling features.

Cost-Effective Solutions that Meet Your Needs

Toshiba WLAN mobility solutions maximize value by using your existing WLAN infrastructure. Specific models operate directly via SIP, and therefore do not require any additional equipment or gateway solutions. Toshiba cordless digital telephones provide a low cost extension from your existing Toshiba digital series desk phone. The cordless phone emulates the desk phone, so that you do not lose functionality while away from your desk. Both solutions makes very cost-effective mobility applications possible with Strata® CIX.™

Polycom SpectraLink Wireless Telephones

Polycom® offers a complete portfolio of SpectraLink® Wireless Telephones for the workplace, fully integrated with Toshiba Strata systems and dedicated to meeting the communication needs of mobile workers. SpectraLink Telephones operate within your facility's micro-cellular architecture or over your WLAN. You can leverage your existing investment by converging voice and data applications on the same WLAN.

Toshiba Cordless Digital Telephones

Toshiba gives you the ability to take full digital desk phone functionality with you, whether it's down the hall, into the conference room, or across campus. These cordless telephones allow you to access some of today's most advanced desk phone features, such as desk phone extension numbers, call forwarding, Caller ID and multi-line access. You can even switch between your cordless and digital desk telephones during a call. And thanks to spread-spectrum and narrow band technologies, Toshiba Cordless Digital Telephones safeguard your phone's frequency range and deliver maximum security.

Toshiba SoftIPT Client

Toshiba gives you the power to stay connected using SoftIPT® soft phone clients that run on your laptop, tablet PC, or PDA via your LAN or WLAN. You can roam anywhere WLAN and the Internet take you, maintaining voice and data functionality.

Toshiba FeatureFlex Personal Call Handler

Toshiba delivers "twinning" capability via its FeatureFlex® Personal Call Handler, which rings your desk phone and cell phone simultaneously to ensure you can always be reached. Furthermore, it provides a number of choices for handling incoming calls including scheduled-based call handling, caller-based call handling, and various sequential and simultaneous ring options.
